

Allow access to location on this device

If you allow access, you will enable Windows to use your device's capabilities to determine your location and Microsoft will use your location data to improve location services. People using this device will be able to choose if their apps have access to location by using the settings on this page. Denying access blocks Windows from providing location to Windows features, Microsoft Store apps, and most desktop apps.

Change

Allow apps to access your location

If you allow access, you can use the settings on this page to choose which apps can access your device's precise location and location history to enable location-based experiences such as directions and weather. If you are signed in with a Microsoft account on this device, your last known location is saved to the cloud, and shared with other devices where you are signed in with your Microsoft account. Denying access only blocks the apps listed on this page from accessing your location.

On

- If Location is turned on, select which apps can use your location by selecting the appropriate on/off switches (to the right of the app).
